

J-Tip™

Needle-Free
Injection System

Delivery of Fast & Effective Needle-Free Anesthesia

Virtually Painless

Completely
Needle Free

Clinically Proven

1-2 Minute
Anesthetic Effect

How Can J-Tip Help?

It is estimated that 20-23% of patients have a fear of needles which can prevent them from seeking the care and routine procedures they need.

The J-Tip is a sterile, single use, needle-free jet injector that works within 1-2 minutes and lasts about 15-20 minutes thereafter. It is FDA cleared for use with Xylocaine (lidocaine) and is a clinically proven pain management option prior to routine needle procedures.

The J-Tip is being
successfully used in the
following departments:

- Emergency- Adult and Peds
 - Pediatrics/PICU
 - Infusion Therapy
- Vascular Access Team
 - Anesthesiology
- Pre-Op and Surgical Services
 - Maternity
 - Radiology
 - ICU/Trauma

The J-Tips is being used
successfully prior to the
following procedures:

- IV Starts
- Blood Draws
- Lumbar Punctures
- PICC Insertions
- IM Injections
- Biopsies
- Minor Surgical Procedures

How Does the J-Tip Work?

J-Tip uses CO₂ to create a fine stream of anesthesia which passes through the skin into the subcutaneous tissue. This spray-like pattern of medication administration allows for broad dispersion and quick absorption without using a needle.

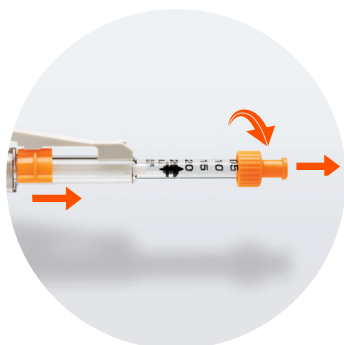

As Easy as 1,2,3,4!

1 Select an injection site and prepare with disinfectant. Allow to air dry.

2 Fill J-Tip with medication.

3 Slide orange Safety Collar forward and remove orange Luer Adapter.

4 Press the J-Tip against skin with a slightly firm compression at a 90° angle. Squeeze Activation Lever to inject. Do not inject directly over a vein.

Importance of Procedural Pain Management

- Helps increase patient satisfaction by helping minimize unnecessary pain and anxiety
- 1 of 9 topics assessed by HCAHPS to evaluate patient satisfaction required by Medicare and Medicaid
- Can help qualify hospitals for higher reimbursement rates (1)
